

Your After Root Canal Treatment Instructions:

1. Now that your root canal is finished, it is necessary for you to schedule an appointment for a permanent post and crown for this tooth.
2. Do not chew on this tooth until the final restoration is completed.
3. Although it does not occur frequently, you may experience some soreness after treatment. This should diminish in a few days. Two Advil tablets, or the equivalent, at 14 hour intervals can be used to reduce symptoms.
4. When you come back for your next regular recall we will do the examination of this tooth and take an x-ray if necessary. It is important that endodontically treated teeth be examined periodically.
5. Thank you for cooperating during the treatment of your tooth. If you have any questions or problems, please feel free to call upon us at any time.
